★ 4" STENCIL TRAYS ★

- ★ Engineered to place stencils into *POSITION AND HOLD* in place while painting on horizontal and vertical pavement surfaces without bending over.
- ★ Two workers will now stencil surfaces *FASTER AND EASIER* than three workers could in the past.
- ★ Stencil remains flat at all times (while painting horizontal pavement surfaces) allowing for more sprays before dripping, resulting in *LESS DOWN TIME* changing and cleaning stencils.
- ★ *EXCELLENT FOR HOLDING ALPHABET AND NUMBER KITS* for custom wording and numbering.
- ★ Developed to *RELIEVE A LABOR INTENSIVE AND HIGHLY REPETITIVE* process, typically using three people to position, paint, and remove stencils efficiently. The workers saddled with positioning and removing the stencils must bend over to the surface to place/position and subsequently bend over to the surface again to remove each stencil. Such repetitive bending and straightening is very tiring and can cause back strain. These activities can lead to lost time and productivity, or worse medical and/or legal expenses. It can also make it hard to *KEEP GOOD HELP*.
- ★ 4" *STANDARD TRAY* has a 37" opening which is enough for most standard wording spelled on a parking lot with individual piece alphabet kits.
- ★ 4" *DOUBLE TRAY* has two 26-1/4" openings 8 inches apart designed for the double word "NO PARKING FIRE LANE" stencil, required for 6" red fire lane wording.
- ★ *HINGED MODELS* allow for easy holding and positioning vertically for curbs and car stops.
